## Table of Contents

<b>Goals of this Experimental Guide</b>	<b>3</b>
What is Patch-Clamp Electrophysiology and Why is it Important?	3
Who This Guide Can Help	5
Contact Precisionary Instruments for Any Additional Experimental Support	6
<b>Gross Anatomic Location of Mouse Brain Structures</b>	<b>7</b>
Mouse Brain Anatomy	7
Key Differences and Similarities	7
Human Brain Anatomy	9
Using Human Brain Tissue in Patch-Clamp Studies	10
<b>Essential Materials and Reagents for Patch-Clamp Electrophysiology</b>	<b>11</b>
<b>Solutions &amp; Recipes for Patch-Clamp Electrophysiology</b>	<b>12</b>
External Solutions	12
Internal Solutions	13
Final Tips and Hints for Making External and Internal Solutions for Patch-Clamping	15
Importance of Osmolarity	15
Practical Solution Preparation	15
Additional Tips	
Helpful Hints	16
Agarose Solution	17
70% Ethanol	18
<b>Making Acute Brain Slices from Mouse</b>	<b>18</b>
Preparing for Slicing Mouse Brain Slices	18
Dissection of the Mouse Brain for Slicing	20
Sectioning Acute Brain Slices on the Compressstome Vibratome	21
Embedding Brain Tissue into a Specimen Tube: A Step-by-Step Guide	21
Cutting Acute Brain Slices on the Compressstome Vibratome	23
Collecting and Incubating Acute Brain Slices	24
<b>Recording from Acute Brain Slices</b>	<b>25</b>
Making Recording Pipettes	26
Lowering the Pipette Towards the Target Cell	26
Making the Gigaseal	28
Establishing the Type of Patch-Clamp Recording	29
Whole-Cell Recording	29
Perforated Patch Recording	30
Single Ion Channel Recordings	32
<b>What to Include in Your Ephys Logbook</b>	<b>33</b>
<b>Making Bipolar Electrodes for Stimulation</b>	<b>34</b>
<b>Troubleshooting Patch-Clamp Electrophysiology</b>	<b>37</b>
