

Precisionary Instruments Expands Global Reach with Launch of Precisionary Europe

ASHLAND, Mass., October 15, 2025 -- Precisionary Instruments, pioneers in advanced tissue sectioning technology, is proud to announce the official launch of Precisionary Europe, strengthening the company's presence and support for neuroscience and life science researchers across the European region.

This milestone marks the next step in Precisionary's international expansion. For the past two years, European sales of Precisionary's Compresstome® vibratomes have been supported by Red Box Direct's Green Leaf Scientific division. With growing demand and momentum, Precisionary is now transitioning to operate under its own brand in Europe through Red Box Direct's Managed Office model.

By establishing Precisionary Europe, the company is able to:

- Deliver a branded presence that fosters closer relationships with researchers.
- Provide localized sales and customer support tailored to the European market.
- Strengthen its commitment to making high-quality tissue sectioning accessible worldwide.

Through the Managed Office model, Precisionary Instruments gains access to established infrastructure, regulatory expertise, and a dedicated sales and support team, all while maintaining a strong European identity. This transition ensures that researchers will benefit from localized service and deeper engagement with the Precisionary brand.

The creation of Precisionary Europe underscores the company's commitment to advancing scientific discovery by delivering innovative solutions for tissue sectioning. With increasing inquiries and expanding applications for the Compresstome® tissue slicer, Precisionary is well-positioned for continued growth and collaboration with laboratories across Europe.

About Precisionary Instruments

Precisionary Instruments designs and manufactures advanced tissue slicers, including the Compresstome® series of vibrating microtomes. The company supports innovation, reproducibility, and translational science through robust tissue sectioning solutions. Learn more at www.precisionary.com.
